## X10

by Pico Electronics

**THE X-10 POWERHOUSE DOES EVERYTHING BUT PUT OUT THE CAT.**

Model CP290

**THE X-10 POWERHOUSE INTERFACES WITH YOUR COMMODORE TO CONTROL YOUR HOME...FOR SECURITY, COMFORT AND ENERGY SAVINGS.**

This remarkable Interface lets you run your home through your Commodore 64 or 128 and a keyboard or joystick. When you're away, it makes your home look and sound lived in. When you're home, it can turn off the TV at night and wake you up to stereo and fresh brewed coffee in the morning. It can conditioner and control your heating.

and then plug the Module into an outlet. The Interface can control up to 256 Modules throughout your home and won't interfere with normal use of lights and appliances. There are plug-in Appliance Modules, Lamp Modules, Wall Switch Replacement Modules and Special 220V Modules for heavy duty appliances such as water heaters and room air conditioners. Plus Thermostat Controllers for central heating and air conditioning, Telephone Responders to control your home from any phone, and much more.

**IT WON'T TIE UP YOUR COMPUTER.** Use your computer only when you're finished, disconnect the Interface into

# Smartwatch security fails to impress: Top devices vulnerable to cyberattack

A new study into the security of smartwatches found that 100 percent of popular device models contain severe vulnerabilities.

By [Charlie Osborne](#) for [Zero Day](#) | July 22, 2015 -- 17:25 GMT (03:25 AEST) | Topic: [Security](#)

*Apple*

A research study conducted by Hewlett-Packard has found serious security issues in today's top smartwatch wearable devices.

Smartwatches are part of the wearable device trend, which extends from medical devices and fitness trackers to acting as an extension of your smartphone.

The [Apple Watch](#) and [Android Wear](#) are examples of popular wearable devices on the market which can pair with smartphones and allow you to view online notifications, send messages and control apps through either the small display or through voice control.

Wearables can be useful and have grown in popularity with the arrival of the Internet of Things (IoT) concept in the marketplace. However, as smartwatches become mainstream,

# Samsung's Tizen said to be riddled with vulnerabilities. Is your smartwatch safe?

BY JERRY HILDENBRAND • Tuesday, Apr 4, 2017 at 7:00 am EDT

 25 Comments

A report from Motherboard is some very bad news for fans of Samsung's *other* operating system, Tizen.

Speaking with Israeli security researcher *Amihai Neiderman* of [Equus Software](#), [Motherboard](#) tells us that there are currently 40 unreported security vulnerabilities that would allow remote execution and hacking of every Samsung TV, watch or phone that uses [Tizen](#) as the operating system. More serious are some allegations about the how and why behind many of these exploits.

It may be the worst code I've ever seen.

While Samsung may not be thinking about replacing Android with Tizen on its phones and tablets, the current ecosystem is about to be expanded in a big way: Samsung is committed to using Tizen on most every smart appliance it sells going forward. Smart refrigerators sound like a great idea until someone hacks your email through one.

# Smart watches: Samsung's Tizen

## About 90% of Smart TVs Vulnerable to Remote Hacking via Rogue TV Signals

By [Catalin Cimpanu](#)

March 29, 2017 01:30 PM 4

A new attack on smart TVs allows a malicious actor to take over devices using rogue [DVB-T](#) (Digital Video Broadcasting — Terrestrial) signals, get root access on the smart TV, and use the device for all sorts of nasty actions, ranging from DDoS attacks to spying on end users.

The attack, developed by Rafael Scheel, a security researcher working for Swiss cyber security consulting company [Oneconsult](#), is unique and much more dangerous than previous smart TV hacks.

### Current smart TV hacks aren't not really "dangerous"

Until now, all smart TV exploits relied on attackers having physical access to the device, in order to plug in an USB that executes malicious code. Other attacks relied on social engineering, meaning attackers had to trick users into installing a malicious app on their TV.

## HAPIfork: Eat slowly, lose weight, feel great!

Eating too fast leads to poor digestion and poor weight control. The HAPIfork, powered by [Slow Control](#), is an electronic fork that helps you monitor and track your eating habits. It also alerts you with the help of indicator lights and gentle vibrations when you are eating too fast. Every time you bring food from your plate to your mouth with your fork, this action is called: a **"fork serving"**. The HAPIfork also measures:

- \* How long it took to eat your meal.
- \* The amount of "fork servings" taken per minute.
- \* Intervals between "fork servings".

This information is then uploaded via USB or Bluetooth to your Online Dashboard on HAPI.com to track your progress. The HAPIfork also comes with the HAPIfork and HAPI.com apps plus a coaching program to help improve your eating behavior.

# Germany tells parents to destroy microphone in 'illegal' doll

by Alanna Petroff @AlannaPetroff

🕒 February 17, 2017: 12:09 PM ET

Germany's telecommunications regulator has warned parents that a doll sold in the country could be used to snoop on families and compromise their personal information.

The regulator has recommended that parents immediately stop use of the "illegal" doll and destroy its internal microphone.

The doll -- called My Friend Cayla -- connects to the internet via Bluetooth. The setup allows it to listen and respond to questions like: "What's the tallest animal in the world?" (Answer: Giraffe)

But the German regulator says the doll's design violates privacy rules. They worry that it could be used to snoop on families.

"The ownership of this device is illegal," said Olaf Peter Eul, a spokesman for the country's telecoms regulator. "We expect people to act as lawful citizens and destroy the functionality of the doll."

# A Smart Pump Used By Hospitals To Deliver IV Drugs Is Vulnerable To Wireless Attacks

Dell Cameron

Sep 12, 2017, 6:00pm · Filed to:

Share [f](#) [t](#) [in](#) [J](#) [G](#)

The last place you should have to worry about being hacked is laid out in a hospital bed. But as wireless devices continue to fill patient rooms, those fears can't help but grow.

Photo: Getty

Last week, the US Department of Homeland Security (DHS) issued an advisory warning about a vulnerability unearthed in one such wireless device. Security researcher Scott Gayou identified eight vulnerabilities in a syringe infusion pump -- a machine used to administer to patients precision doses of medication intravenously.

Patching has long been one of the most tedious chores for those who want to keep their electronic devices secure or up to date. Sometimes, patches require a restart, disrupting your workflow. Sometimes, patches screw up the software, making it unusable. These are just some of the reasons why users normally dread patching.
